

TERAFLEX

The TeraFlex Adjustable Track Bar is a great addition to any TJ or XJ Lift. The design uses steel cups in a forged housing along with a heavy coil spring to ensure long life and improved driveability as compared to other less expensive designs which use plastic cups.

Squeezing the joint with a large pair of pliers will compress the coil spring vertically up to 0.030 inches. This is normal movement. Excessive wear in the ball socket will result in side-to-side play which indicates the joint is worn out and should be replaced.
